

WISEsecure

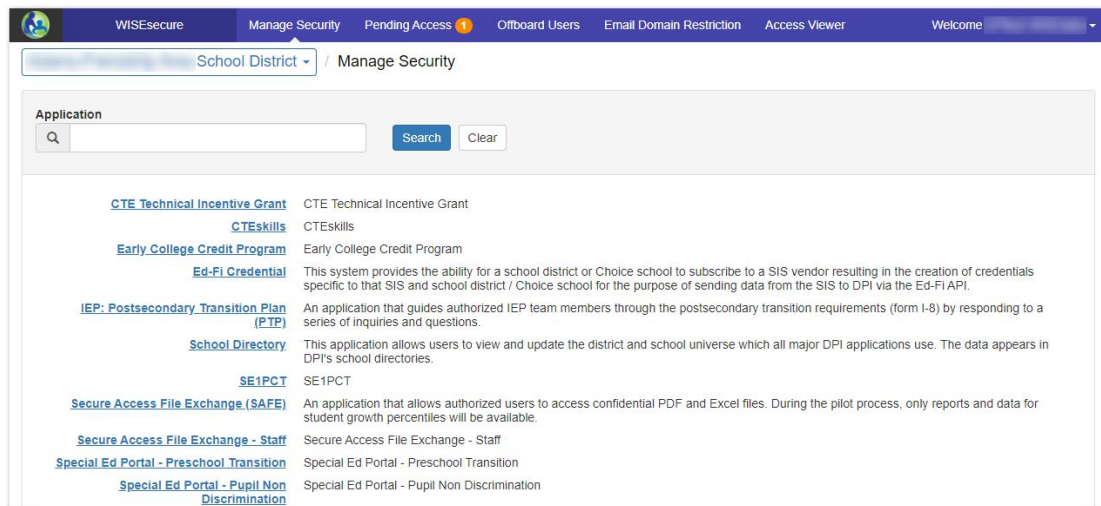

New Application Preview

Starting in April, WISEsecure is taking over as the new application for application security management (ASM). Security administrators can use WISEsecure to easily review application access requests, grant user roles for applications, offboard users, and manage which email address domains are able to log into WISE applications.

Here's a brief tour of what WISEsecure will look like and how it works. As WISEsecure is still in development, please note that images below are subject to change.

Manage Security

The fastest way to assign roles to individual users is the **Manage Security** page. On the Manage Security page, you can select which application to add or remove user roles for by clicking its name, or search for an application in the search bar.

Once you select an application, you'll see users who have user roles assigned for that application. To add a new user, click **Assign User**. You can also assign someone to be able to assign access to the application by clicking **Assign/View App Admin**. To remove a user's access to an application, click the user's row, then click **Remove**.

School District /

WISEdata Portal User Role Assignments(Add / Remove access / roles for the users):

Organization: [redacted]

[+ Assign User](#)
[← Go Back](#)
[+ Search User](#)
[+Assign/View App Admin](#)
[Others who may assign access for WISEdata Portal](#)

	First Name	Last Name	Email	Role	District/School
▲	Joe	[redacted]	[redacted]@dpi.wi.gov	Agency	Districtwide
	<div>Role</div> <div>Agency</div>			<div>School</div> <div>All Schools</div> <div>Remove</div>	
▶	Jeff	[redacted]	[redacted]@archy.tech	Agency	Districtwide

1 - 2 of 2 items

After you click Assign User, the **Assign Roles for Users** window appears. Here, you can search for users by email or by name and assign them specific roles.

[Add & Close](#)
[Clear](#)
[Cancel](#)

Once you've selected a role, click **Add & Continue** to save the change and keep the window open, or **Add & Close** to save the change and close the window.

Managing Access Requests

On the **Pending Access** page, you can see users who have requested access to applications. From there, you can review those requests and either grant access or deny the request with an optional comment for explanation.

Offboard Users

If a user leaves your organization or no longer needs access to WISE applications, you can use the **Offboard Users** page to remove that user's access to applications. You can search for users by email or name, then review their access to applications. Click **Revoke All Access** to fully offboard the user and remove their access to WISE applications.

Offboard User (Remove Access)

User Name: Organization: School District

Application	Role	Agency
School Directory	Directory Update	Adams-Friendship Area
Secure Access File Exchange (SAFE)	ACT NCRC WorkKeys	Adams-Friendship Area
Tuition Waiver Parent	District Administrator	Adams-Friendship Area

Cancel Revoke All Access

Email Domain Restrictions

On the **Email Domain Restrictions** page, you can specify which email domains (such as “@dpi.wi.gov”) can be used to request access to and log into WISE applications.

WISEsecure | Manage Security | Pending Access | Offboard Users | **Email Domain Restriction** | Access Viewer | Welcome [User Name]

School District / Register Organization's Email Domains

Email Domain

WISE ID email will be validated with below registered domains for your organizations in future

Domain	Added by	Modified Date
@dpi.wi.gov	WISEdata, DPITest	2/19/2020
@gmail.com	WISEdata, DPITest	3/9/2020

User Lookup From:

☒ **WISE ID**
Enables user lookup from WISE ID systems. WAMS optional when your district already operates within Google Domain e.g., you are able to log in to your district applications or access google drive using a district-assigned Google account. [Click here](#) for more details.

☒ **WAMS**
Enables user lookup from WAMS. In order to access WISE Secure Applications, user need a personal WAMS ID.
